

SwitchBack

POWERED BY CRASHPLANPRO

Auxenet Services Corporation introduces SwitchBack Backup Services

Auxenet has been trusted to manage computer systems for small businesses in Puget Sound since 2004. Now we can offer a convenient, cost effective, reliable, and secure backup solution bundled with our IT services.

CrashPlan PRO is the first and only backup solution that combines an extremely people-friendly client with a sophisticated enterprise server to continuously protect your business or personal computer data.

SwitchBack is a new backup service based on CrashPlan PRO that provides for both onsite, offsite, encrypted, and archival backup storage bundled with the professional IT support of Auxenet Services Corporation.

Onsite Backup provides a fast solution for backing up to a disk based backup destination within your home or office.

Online Backup - a significant improvement over old fashioned tape or disk backups. Backup to a remote, secure location.

Offsite backups engineered for laptops or remote workers. Quietly and efficiently backup from any fast network.

SwitchBack solves problems that plague computer systems everywhere. Your important data is stored as ephemeral bits of magnetic data on delicate hard drives. On average, they fail after about three years of use. Tape or disk backup systems in place at home or in business require the regular maintenance. Sixty percent of the time, these backup systems are found to be unusable when they are needed most. Backup solutions that are located in the presence of the original data can be lost by theft, fire or other disaster. SwitchBack solves all of these problems by backing up your data automatically, silently, and securely to our data center in eastern Washington.
